Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 Excerpt: . energy experienced by the whole string during the passage of the wave over it will be  $W-H = (\frac{1}{2} - 2iB) dx + Vdx + dx$ , . K A. whence we have at once verifying the statement made above. 9. When this wave of extension reaches C it will be succeeded by a wave of contraction down the string corresponding to velocity  $3V$ , and thereafter by a series of wormlike movements whose velocities, beginning with the first, are  $V, 2V, 3V, 4V, \dots$ . Suppose, for instance, that a wave of extension has just reached C, the velocity corresponding to it being  $nV$ , it will be followed by a wave of contraction corresponding to  $(n+1)V$ . For let (fig. 11) the unstretched lengths of CP, PQ be  $x, dx$ , the stresses in PQ before and after the downward wave being numerically  $g(l-x)$  and  $gx$ , the energy surrendered by PQ is  $r(23-2lx) dx$ . The work done by gravity on the whole string is (1) That on the string as a rigid body supposed to move with the velocity  $nV$ , and therefore  $=gl \cdot jr$ . (2) That due to the collapse of CP on BP, which is equal to  $-(l-x + x) dx = -f \cdot dx$ . A A The only change of kinetic energy which takes place in the string is that acquired by PQ, whose velocity changes from  $nV$  to  $(n+1)V$ , suppose we have, from the equation of energy,  $(V - nV)dx = (r \cdot dx + n \cdot Vdx + dx)$ , whence  $P M = n V \dots$
