RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center, 1990 OCLC Number: (OCoLC)65174776 Excerpt: . . . the data was given by the equation 21. 2 (3. 4) Stl 0. 212 1 Reoo. D) For a Reynolds number of 80, this equation yields St1 0. 1558. As shown in table 1, the computed values of St1 are very close to the experimental value in all cases. The largest deviation is 3. 47 and most of the values are within 2 of the experimental frequency. Therefore, the primary vortex-shedding frequency in the wake is well-predicted with either set of boundary conditions. Plots of the time history of the pressure and the resulting frequency spectrum at the selected point in the wake flow from the finite-difference calculations are shown in figure 4 for both sets of boundary conditions. The corresponding plots for the fully-spectral calcu-lations with characteristic boundary conditions are shown in figure 5. As shown in figure 4, the solution with primitive-variable boundary conditions produces a low frequency which is not seen in the spectrum from the calculations with the...

Reviews

Extensive guide! Its such a excellent read. This can be for anyone who statte that there was not a worth looking at. I am just effortlessly will get a satisfaction of looking at a written publication.
-- Melvin Hettinger

This book will not be effortless to start on reading through but very exciting to learn. It is amongst the most remarkable book i have got go through. Once you begin to read the book, it is extremely difficult to leave it before concluding.
-- Dr. Easton Collier DVM
